**Essay**  
On Learning Humility: *A Thirty-Year Journey*  
by John M. Freeman  
A physician looks back on difficult cases in neonatology.

17  
**Moral Standards for Research in Developing Countries**  
*From “Reasonable Availability” to “Fair Benefits”*  
by the participants in the 2001 Conference on Ethical Aspects of Research in Developing Countries  
Commentators have argued that when research conducted in a developing country shows an intervention to be effective, the intervention must be made “reasonably available” to the host population after the trial. This standard is mistaken: it offers a benefit, but not necessarily a fair benefit.

**Do as I Say, Not as I Do:**  
*Why Bioethicists Should Seek Informed Consent for Some Case Studies*  
by Armand H. Matheny Antommaria  
Bioethicists have scrupulously defended patients’ privacy and autonomy in medical care settings; they have not always taken the same care in their own work.

**Monitoring and Manipulating Brain Function:**  
*New Neuroscience Technologies and Their Ethical Implications*  
by Martha J. Farah and Paul Root Wolpe  
An update on neuroscience’s improbable realities—and their byproduct, the new field of “neuroethics”—in the decade after “the decade of the brain.”
