"This knowledge is irrevocable." So reads an opening line in the terms-of-service agreement for 23andMe, a leading direct-to-consumer genetic testing company. This remarkable phrase attests to an increasing recognition of the role genomic knowledge plays in shaping human life. On the one hand, genomic knowledge is a gift, creating novel insights into the genetic drivers of disease and into the geographical paths of our ancestors. On the other, it is a weight, creating new obligations, new forms of social classification, and new forms of surveillance. Thus, we are faced with a fundamental question: how can we live well in the face of knowledge that can change the criteria, conditions, and lived experience of life? What does it mean to be a good biocitizen?

SPEAKERS

Catherine Bliss (UC San Francisco)
Catherine Clune-Taylor (Princeton)
Melinda Hall (Stetson Univ.)
Eva Kittay (SUNY Stony Brook)
Jessica Kolopenuk (Univ. of Alberta)
Colin Koopman (Univ. of Oregon)

Leslie Larkin (Northern Michigan)
Alondra Nelson (Columbia)
Carolyn Neuhaus (Hastings Center)
Jenny Reardon (UC Santa Cruz)
Sandra Soo-Jin Lee (Stanford)
Joe Stramondo (San Diego State)

Conference Organizers: Joel Michael Reynolds and Erik Parens, The Hastings Center; Collaborator: Karen Porter, Brooklyn Law School

Sponsored by The Hastings Center and Brooklyn Law School's Center for Health, Science, and Public Policy; co-sponsored by Columbia University's Department of Medical Humanities and Ethics and Harvard Medical School's Center for Bioethics
